

PRO-LINE STONE VENEER Tech Bulletin 3900-01

CLEANING MANUFACTURED STONE VENEER

To remove mortar smears and construction dirt use a 1 to 10 dilution of PROSOCO, INC., "Sure Klean Vana Trol" to fresh water per the following instructions. ("Or equal" products are acceptable. This bulletin is based on product testing as footnoted.) Clean surface within 7 days of construction for optimum result.

Test the following procedure first on a small area before general application to insure the desired result.

1. Prewet the surface with water.
2. Apply cleaning solution to recommended dilution.
3. Wait 3-5 minutes.
4. Rinse thoroughly (if possible with garden-hose pressure spray).

Read all manufacturer's instructions for full descriptions on use, preparation, application, safety information and technical support before starting the application.

For a non-chemical alternative use a 5 parts water to 1 part white vinegar solution. Apply with soft bristle brush and rinse with clean water. Stubborn stains may require repeated applications or commercial chemical solutions.

Excessive staining or aged mortar may not be removable. The best recommendation is to keep the stone surface as clean as possible at time of application.
